

Super English

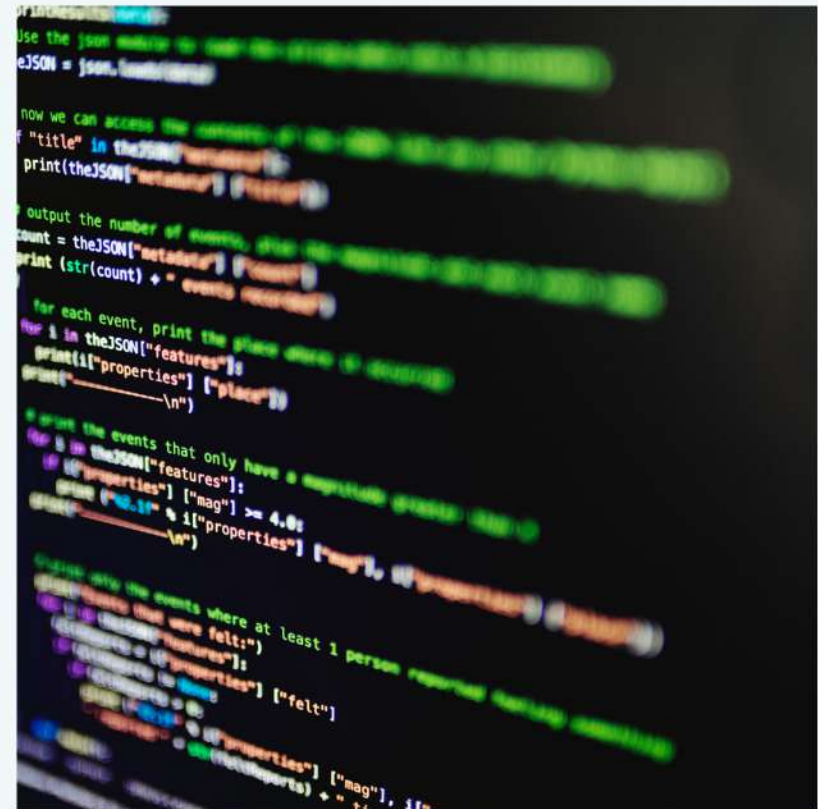

IELTS Speaking - Part 2 - Artificial Intelligence (AI)

Vocabulary

Algorithm

- **Definition:** A set of rules or steps that a computer follows to solve a problem or complete a task.
- **Example Sentence:** Search engines use complex algorithms to rank websites.
- **Synonyms:** procedure, formula, method
- **Question:** Can you think of a situation where an algorithm might affect your daily life?

Use the word to describe the picture in a sentence.

Vocabulary

Machine Learning

- **Definition:** A type of artificial intelligence where computers improve their performance by learning from data without being directly programmed.
- **Example Sentence:** Machine learning allows apps to recommend movies based on your viewing history.
- **Synonyms:** adaptive learning, data-driven learning
- **Question:** How do you think machine learning is already being used in technology you use every day?

Use the word to describe the picture in a sentence.

Vocabulary

Automation

- **Definition:** The use of machines, software, or technology to perform tasks without human involvement.
- **Example Sentence:** Many factories rely on automation to speed up production.
- **Synonyms:** mechanization, robotics, computerization
- **Question:** Do you think automation is more helpful or harmful to workers? Why?

Use the word to describe the picture in a sentence.

Vocabulary

Singularity

- **Definition:** A future point when artificial intelligence becomes so advanced that it surpasses human intelligence and control.
- **Example Sentence:** Some scientists believe the singularity could change society in unpredictable ways.
- **Synonyms:** technological singularity, AI revolution
- **Question:** Do you think the singularity will happen in your lifetime? Why or why not?

Use the word to describe the picture in a sentence.

Reading

Artificial Intelligence (AI)

Text: Artificial intelligence is changing many aspects of daily life. From online shopping to healthcare, AI systems use algorithms and machine learning to make decisions and predictions. Automation has made many jobs faster and more efficient, but it also raises concerns about job loss. Some experts even predict a future singularity, when AI becomes more intelligent than humans. While this could bring exciting opportunities, it also presents challenges we must prepare for.

Question: What do you think are the biggest advantages and disadvantages of artificial intelligence in society?

Idioms

Match the idioms to their definitions and complete the sentences.

Cutting-edge

To be creative and find new, original solutions.

Think outside the box

To create or use the newest and most advanced technology.

Push the envelope

To go beyond normal limits and take bold risks.

1. Tech start-ups are trying to _____ with new applications of AI.
2. The company is known for its _____ research in artificial intelligence.
3. Inventors often need to _____ when designing new technology.

Discussion

Read the pros and cons and discuss the questions.

Pros of Artificial Intelligence:

1. Increases efficiency and productivity
2. Improves healthcare, education, and daily convenience
3. Can handle dangerous or repetitive tasks instead of humans

Cons of Artificial Intelligence:

1. May lead to job loss and unemployment
2. Raises privacy and ethical concerns
3. Risk of over-reliance on technology

1. Do you think the benefits of AI outweigh the risks? Why or why not?
2. How should governments regulate artificial intelligence?
3. Would you trust an AI to make important decisions, such as in medicine or law?

Casual Talk – Food

1. Do you enjoy cooking? What's your favorite dish to prepare?
2. If you could eat only one type of food for the rest of your life, what would it be?
3. Have you ever tried a food from another country that surprised you?
4. Do you prefer eating at home or dining out at restaurants? Why?
5. What's the most unusual food you've ever eaten?

See you next time!
